

CSS Exercises for Strat Hawk Destinations

HTML changes

1. Open **destinations.html** in **strat-hawk** folder
2. Remove width attribute in tags and include class definition
3. Enclose each image and respective heading into separate div

Old Code

```
<h4>Germany</h4>

<h4>Australia</h4>

```

Modified Code

```
<div class="destination">
  <h4>Germany</h4>
  
</div>
<div class="destination">
  <h4>Australia</h4>
  
</div>
```

Style changes

1. Open **styles.css** in **strat-hawk/styles** folder
2. Apply left margin to heading (**.heading**)
3. Apply styles for destination <div> to place the destinations adjacent to each other
4. Resolve the image issue using the below max-width and max-height properties. These properties help to accommodate image within a specified height and width.

`margin-left: 1rem`

```
.destination {  
  float: left;  
  margin-left: 1rem  
}
```

```
.destination-image {  
  max-width: 100%;  
  max-height: 300px  
}
```
