

# CSS Exercises for Font

# Files and Folder Creation

1. Copy 'profile' folder from 'html-learn' folder and place it under 'css-learn' folder
2. Create a folder named 'styles' in 'profile' folder
3. Create a file named 'profile.css' in 'styles' folder created in the previous step

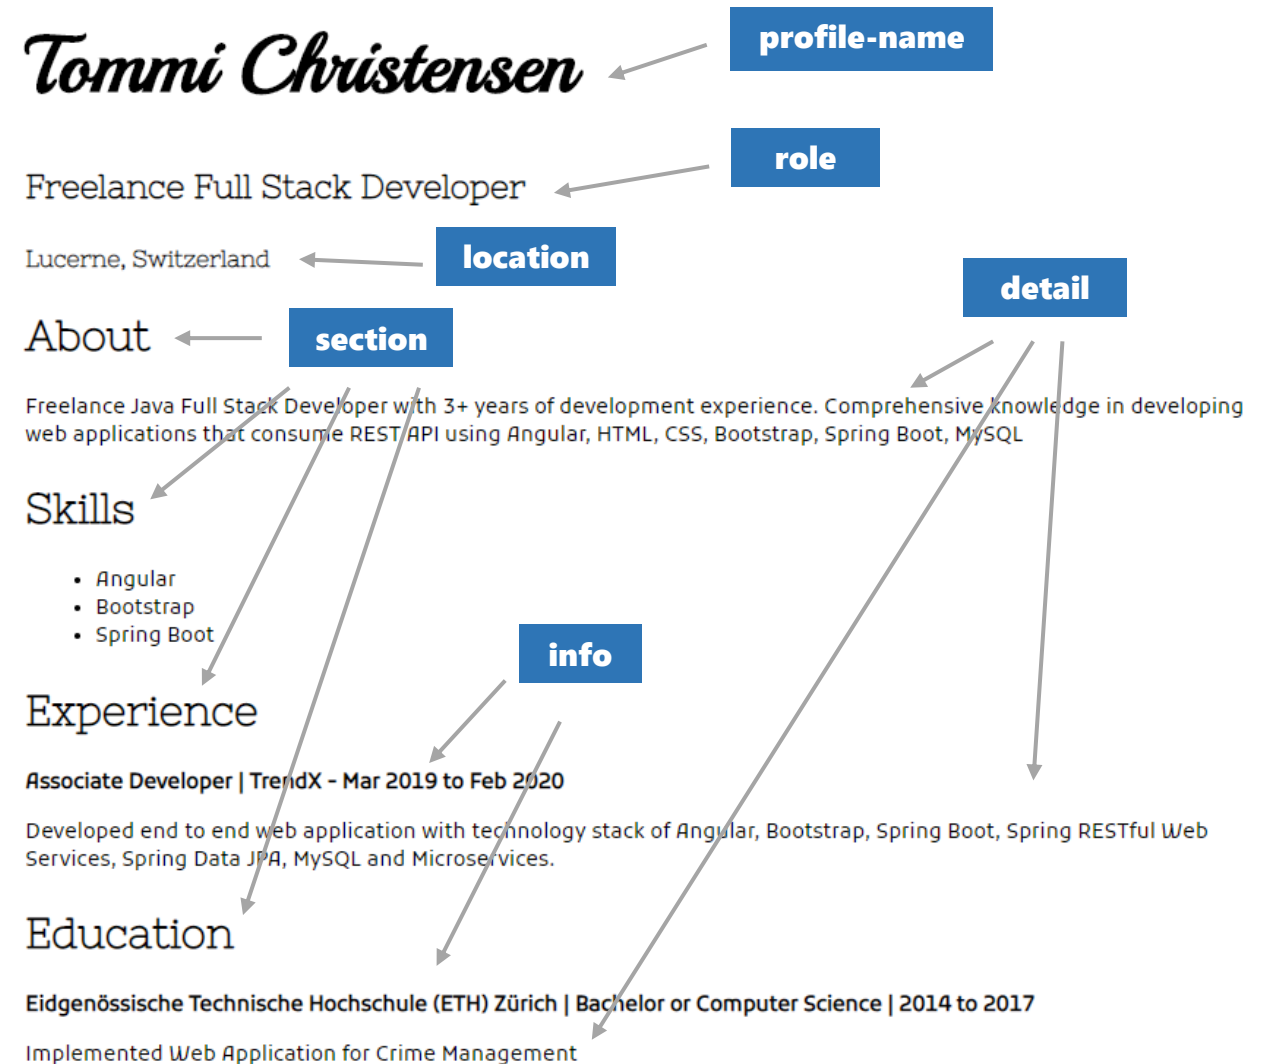

# HTML

1. Include class definition for various sections
2. The profile-name class definition given below as example. Implement rest of them in similar fashion.

```
<h1 class="profile-name">Tommi Christensen</h1>
```

3. Include link tag to refer "profile.css"

# CSS

1. Go to [fonts.google.com](https://fonts.google.com) and find fonts for each section
2. Copy the @import for each one of the font identified and paste it in 'profile.css'
3. Include class definition and apply appropriate font size. Refer one example below:

```
.info {  
    font-family: "Kufam";  
    font-size: 12px;  
    font-weight: bold;  
}
```
